

Removable Partial Care

Wear your partial during the day, take it out at night when you sleep.

Whenever your partial is not in your mouth, it should always be put in its case. This will avoid loss or damage...especially because pets love to chew on them!

Keep your partial clean by brushing it once a day with a toothbrush, soap, and cold water. Brushing your partial removes the plaque and eliminates odors.

Kleenite or other cleaners can be used but do not take the place of brushing.

Keep partial away from hot water, hot car dashboards, glove compartments, pockets, and the washing machines because the heat will distort the plastic.

Never put your partial in a napkin because it may end up in the trash inadvertently.

If you have any questions or concerns about your partial or you believe it needs adjusting, call us. Do not try to adjust it yourself.

Remember, always bring your partial to your appointments.

Partial replacements are expensive, but with proper care they will last for years!
